

STIHL AI Teach In: Prompt Engineering Workshop

A Use Case Based Approach
21 January 2025, Waiblingen

What We'll Cover

- Introduction
- Workshop Overview
- Use Case Based Learning
- Microsoft Copilot 365
- Embedding AI in Employee Workflows
- Takeaways

Who Am I

- Neil Sinclair, Senior Data Scientist, diconium Berlin
- Deloitte strategy consultant turned data scientist
- Projects: retail, insurance, and numerous GenAI projects

Overview of the Workshop

Who the Workshop Was Designed For

- A big part of your role is **making decisions**
- You want something that can help you make **better decisions quicker**
- You want to **reduce tasks that take up a lot of time** and have little value so you can focus where you **make the biggest impact**

Overview of the Workshop

Who the Workshop Was Designed For

- A big part of your role is **making decisions**
- You want something that can help you make **better decisions quicker**
- You want to **reduce tasks that take up a lot of time** and have little value so you can focus where you **make the biggest impact**

Our Approach

- We will focus on **use-cases** to help you be more efficient
- We will learn techniques only as they support the use-cases
- This is a **hands-on session** – a lot of the time you'll be working

Capabilities and Drawbacks

What Language Models Excel At

- **Generating text**
 - Writing documents or code
- **Summarising text**
 - Research
- **Reasoning (Limited)**
 - Data processing (e.g. classification)
 - Planning and ideation with or without data
- **Information retrieval***
 - Semantic (meaning-based) search

*This is not specific to recent LLMs, but has been popularised recently

Capabilities and Drawbacks

What Language Models Excel At

- **Generating text**
 - Writing documents or code
- **Summarising text**
 - Research
- **Reasoning (Limited)**
 - Data processing (e.g. classification)
 - Planning and ideation with or without data
- **Information retrieval***
 - Semantic (meaning-based) search

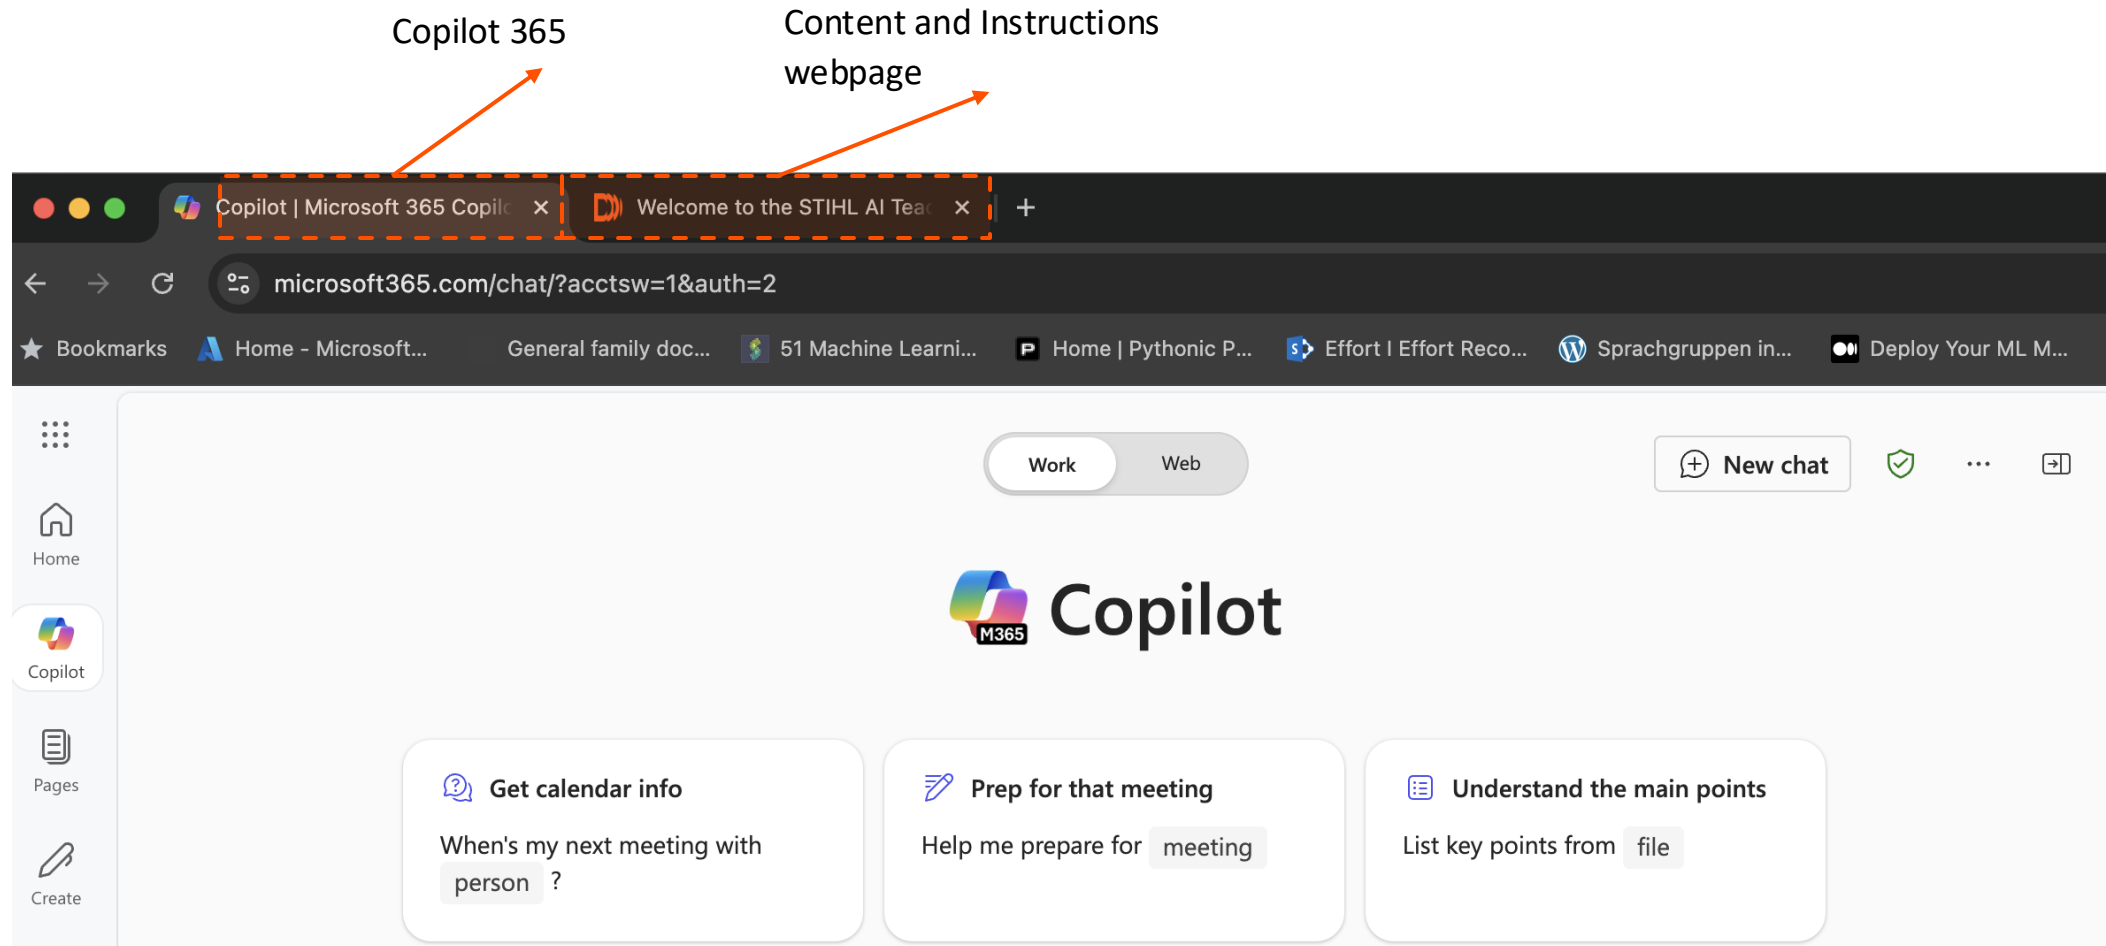

What We Need to Watch Out For

- Language models give convincing answers – even when they aren't real
- This is called **hallucination**
- Language models are **tools**, not replacements for people
- Limited to knowledge in its training data which may not be relevant or true any more
- **Responses are not always the same** – even for the same input

*This is not specific to recent LLMs, but has been popularised recently

Overview of the Browser

Overview of the MS365 Copilot

The screenshot shows the MS365 Copilot web interface. At the top, a navigation bar includes a search bar and a toggle between 'Work' and 'Web' modes. The main area features a 'Copilot' header with the tagline 'Your AI assistant for work' and several task cards like 'Stay informed', 'Copy-edit this', and 'Track your tasks'. On the right, a sidebar lists 'Agents' (Visual Creator, My Personal Assistant) and 'Recent chats'. At the bottom, a 'User message window' contains an 'Add content' button and a file attachment icon. Annotations with orange arrows point to these elements: 'Toggle between "Work" and "Web"' points to the top toggle; 'Start a new chat' points to the 'New chat' button; 'Previous chats' points to the 'Recent chats' list; 'Saved prompts' points to the 'View prompts' button; 'User message window' points to the bottom input area; 'Attach a file' points to the file icon; and 'Attach a file' points to the file icon in the bottom right.

Your AI assistant for work

Stay informed

What's the latest from Neil Sinclair, organized by emails, chats, and files?

Copy-edit this

How's this grammar? [insert content here]

Track your tasks

What should be on my radar from emails last week?

Boost your knowledge

Help me learn about [topic]

Track what's important

Summarize messages from my manager in the last 48 hours

Jump-start a draft

Create an FAQ based on doc

View prompts

Agents

- Visual Creator
- My Personal Assistant
- Get Copilot agents
- Create an agent

Recent chats

- List the files you have access 1/10
- Please list the files you have 1/10
- What was the last email i got 1/10
- What happens when you mix I... 1/10
- Please can you look at the mes 1/8

The Expert

Adding an expert to your team

Starting with the Basics: The Expert

- Let's get started!
- Go to your browser.

Key Takeaways

- The **instruction message** defines the **character of the bot**
- Add information about **your company or department** to get more **custom results**
- **More detail** is better
- The process is **experimental** – create, test and iterate
- You can **save your best prompts** for later, enabling you to store useful bots

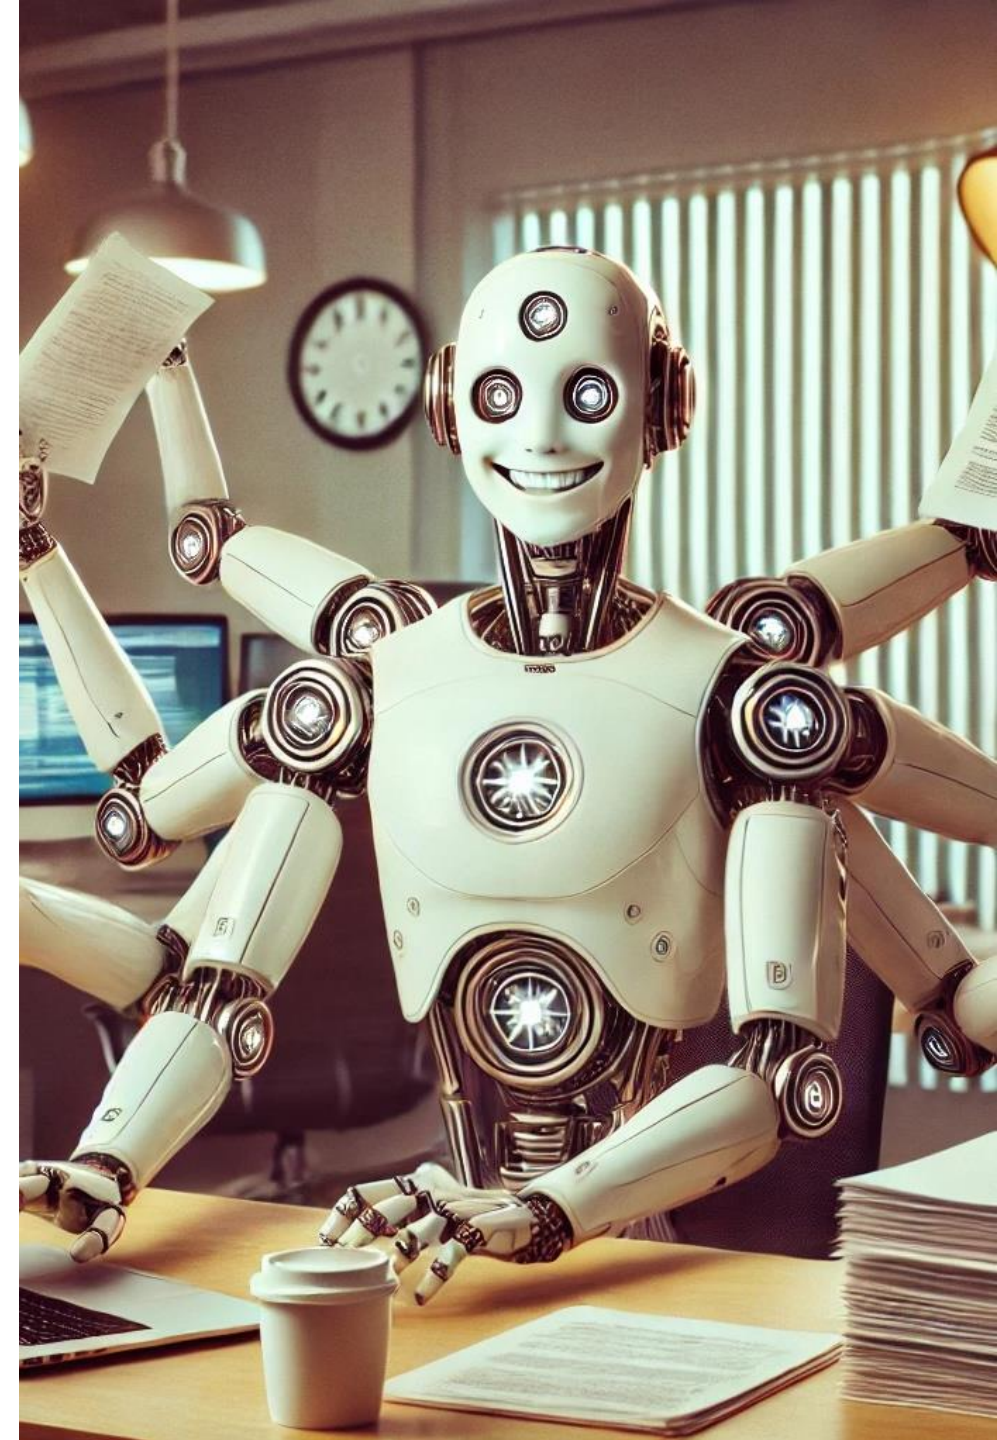

The Executive Assistant

A personal executive assistant so you can focus on what matters

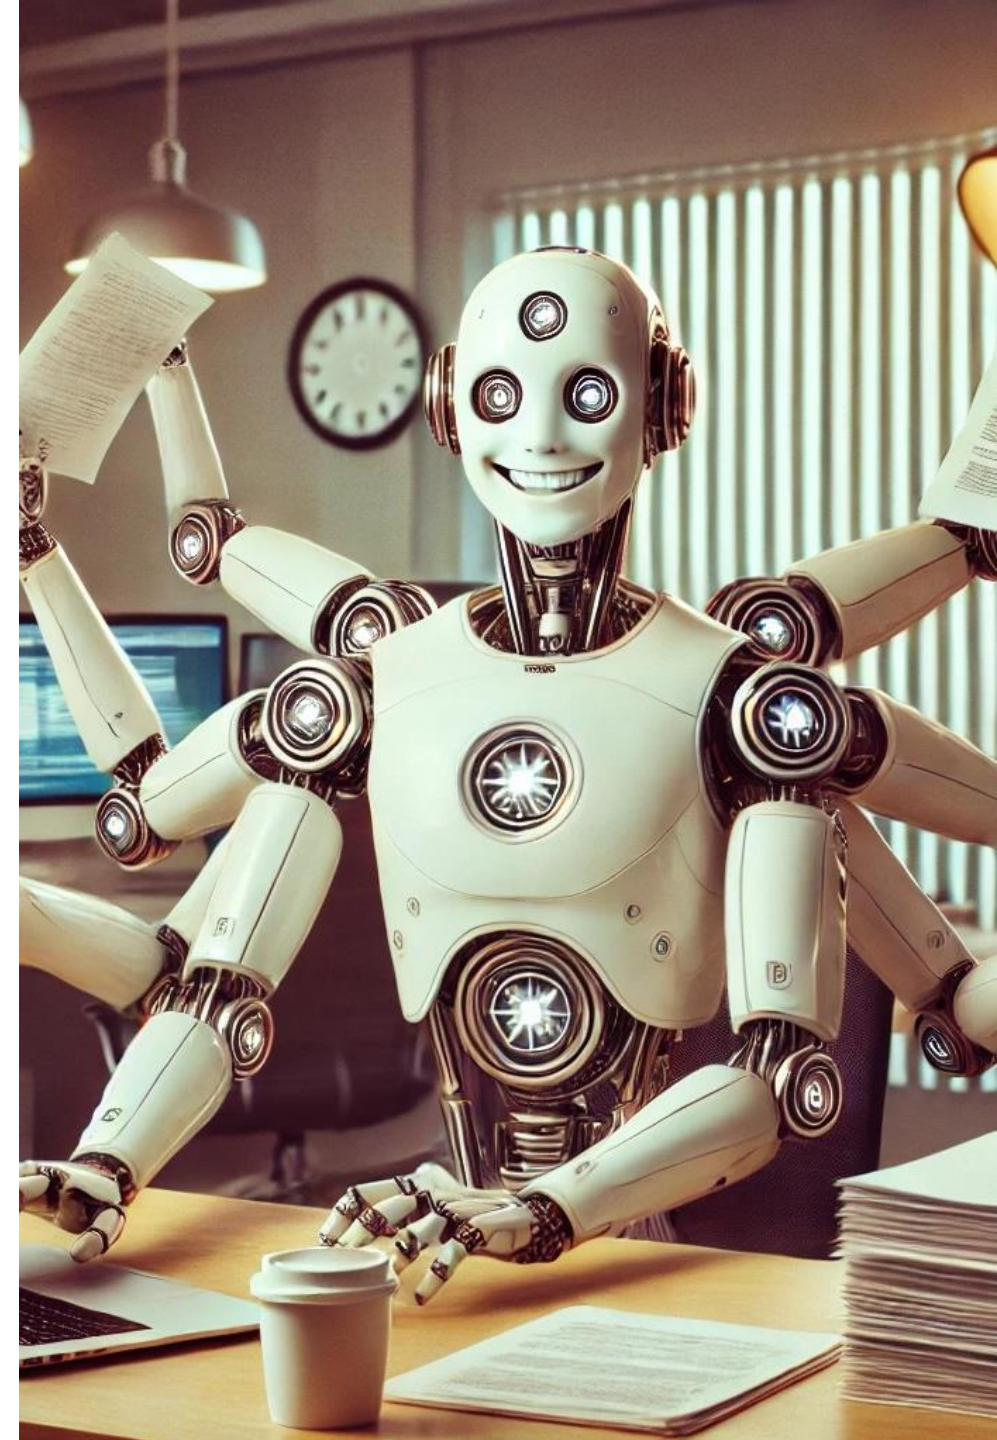

The Executive Assistant

- Like a great executive assistant, your personal bot can take over **some of the boring work** you need to do. It can:
 - **translate** something quickly
 - **draft the perfect email** in seconds
 - create a **quick summary** of the main points in a document

Key Takeaways

- Your assistant can **speed up mundane tasks**
- **The instruction message** helps to set the tone of your assistant
- Give your assistant **the key points** and they can fill in the rest
- You can **iterate on the work** with the assistant by asking it to change parts of its work
- You can give your assistant **documents** to work off
- **You MUST check their work** before you send it off

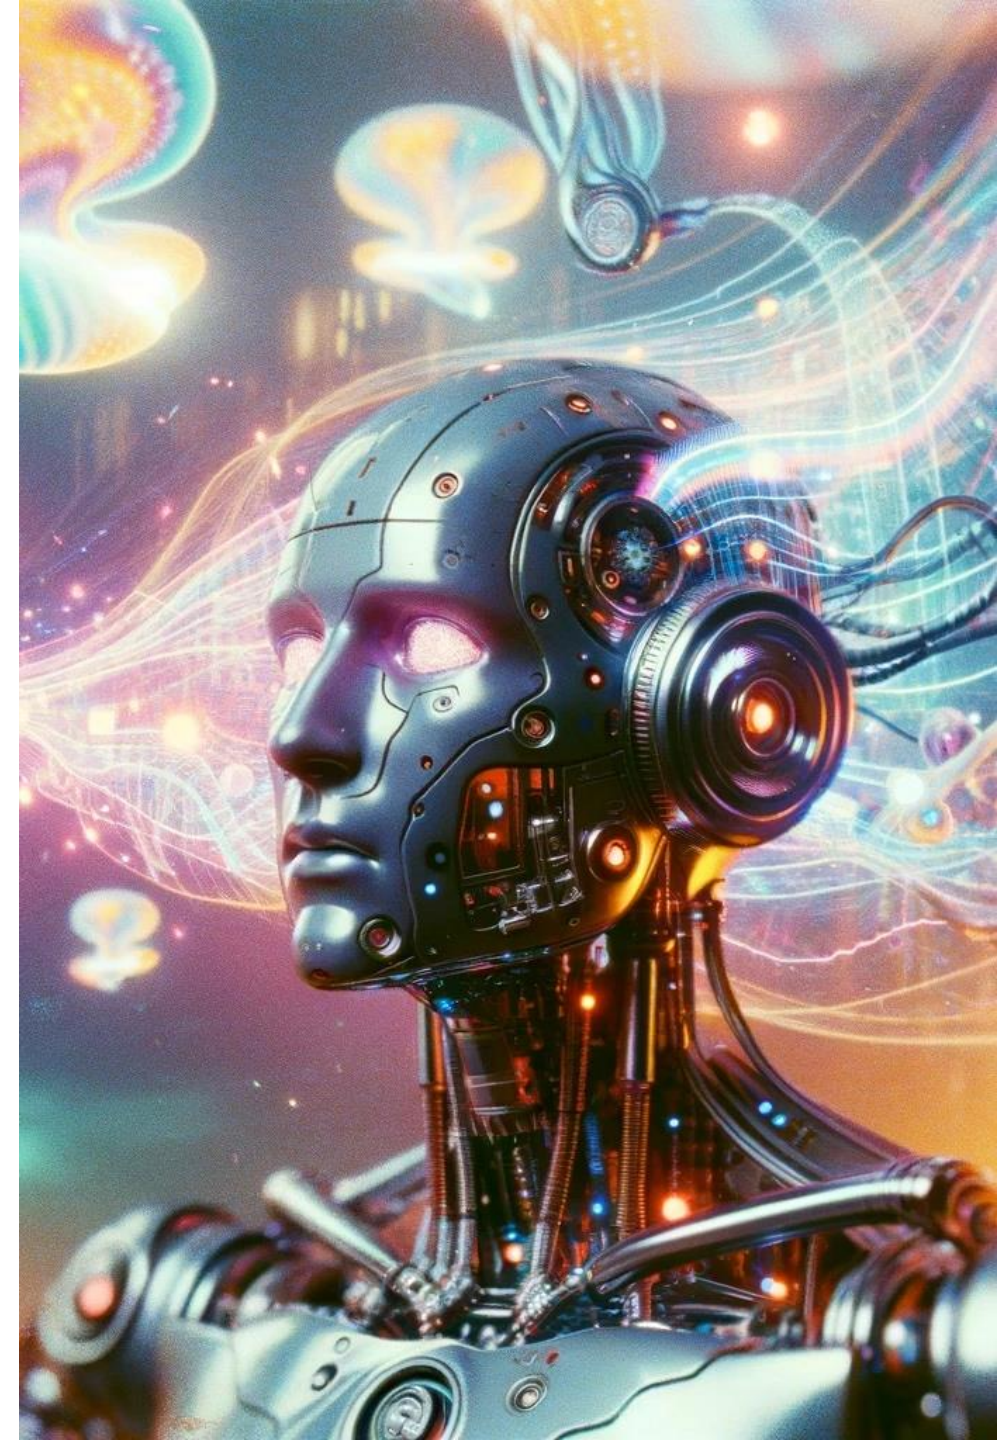

The Research Assistant

Giving your assistant documents and extracting insights

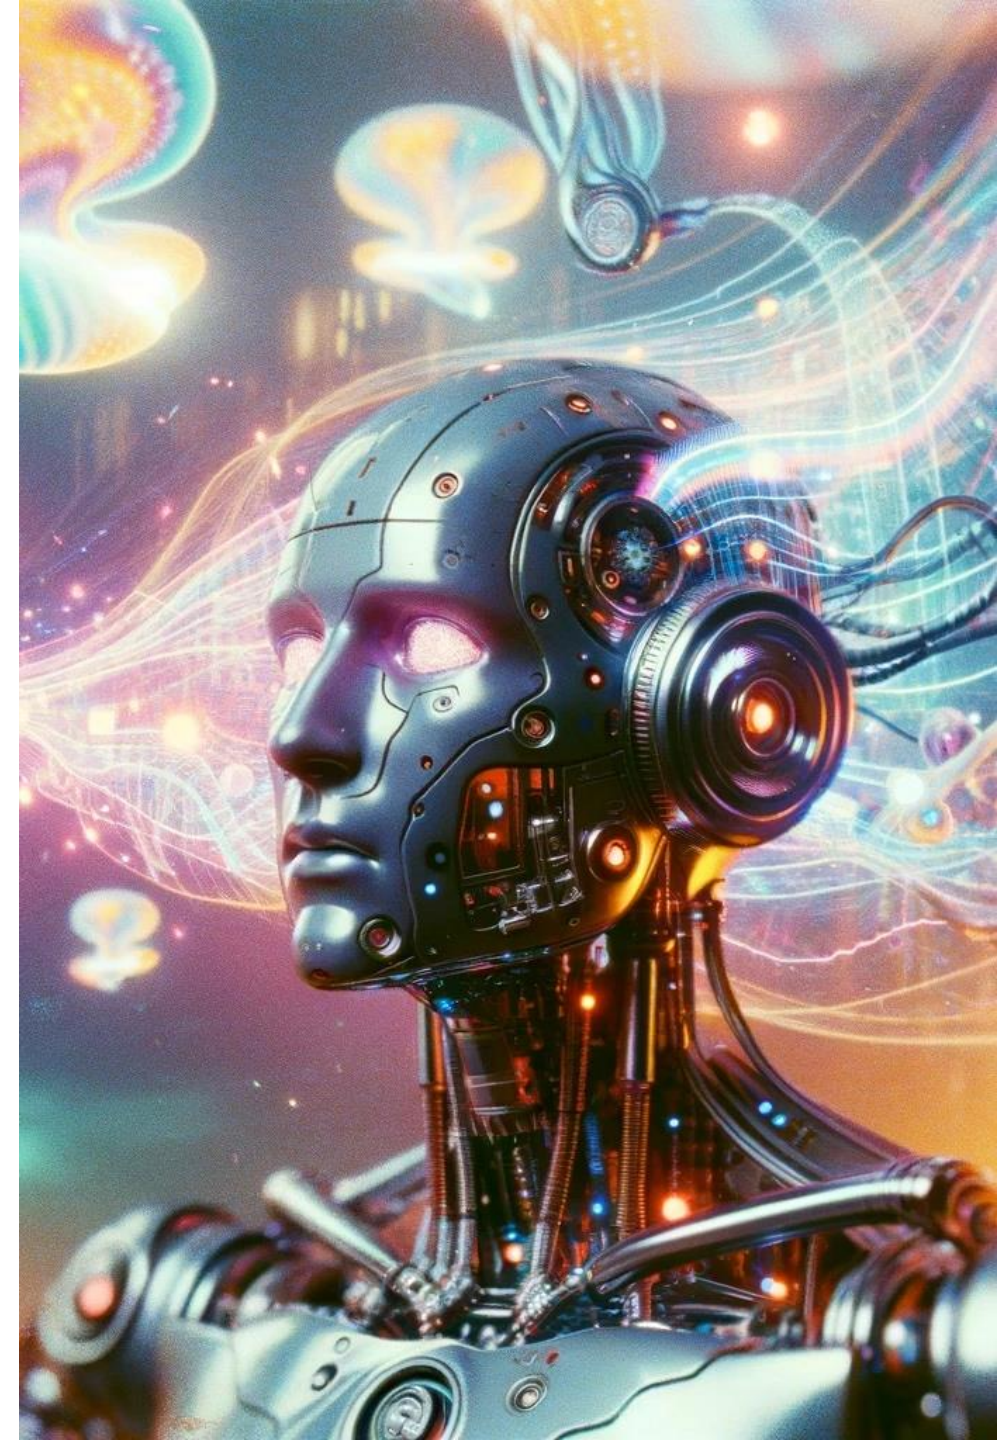

Hallucinations and Reasoning

- Bots are very good at **generating text which looks correct**, but which has no basis in truth – this is called **hallucinating**
- One way to stop this is to **give information to bot** to answer questions from
- Like a good student with a good textbook in front of them, bots are (surprisingly) **good at reasoning** when the **information they have is good**
- When a bot generates a response using an external document, we call this **Retrieval Augmented Generation - RAG** for short

Key Takeaways

- Providing your assistant with information to answer a question vastly improves its accuracy
- You can do this by uploading one or more documents
- You can tell your assistant how you want it to answer/summarise/analyse information
- You can ask your assistant for insights (i.e. not just a summary) on one or more documents
- Copilot can go online and do research as well
- This is an analysis aid, not a replacement for in-depth analysis

Microsoft Copilot 365

Connecting an Assistant with Your Documents

Microsoft Copilot 365

- Microsoft Copilot 365 allows one to create an assistant within your company's Microsoft ecosystem
- Your assistant can have access to:
 - Your emails
 - Your files
 - Microsoft Office apps
- All of this is within a data-safe environment

Embedding AI in Employee Workflows

How to get employees to reap the benefits of AI

Why do we still need Humans?

The bigger picture

- The latest language models (e.g. GPT o3) are achieving human-level results – but they're wildly expensive and don't have clear use-cases
- Copilot is very useful, but makes convincing mistakes and needs clear instructions
- There is a lot of low-hanging fruit where current language models – and even earlier, smaller models – can improve our day-to-day work
- Humans are still smarter – we should find ways to use current LLMs to give employees more time to do tasks where they really add value

Embedding AI in STIHL

Phased roll out

- Identify which teams will see the quickest gains (e.g. marketing)
- Role out access to tools in **steps**

Embedding AI in STIHL

Phased roll out

- Identify which teams will see the quickest gains (e.g. marketing)
- Role out access to tools in **steps**

Training

- Show people where and how they can access the tools
- Show users how the tools can help them **in their specific roles**

Embedding AI in STIHL

Phased roll out

- Identify which teams will see the quickest gains (e.g. marketing)
- Role out access to tools in **steps**

Sharing is Caring

- **Create a space** on Teams for colleagues to show their best successes - and their worst failures – with GenAI
- This will help to inspire others to use the tool and understand its uses and limitations

Training

- Show people where and how they can access the tools
- Show users how the tools can help them **in their specific roles**

Embedding AI in STIHL

Phased roll out

- Identify which teams will see the quickest gains (e.g. marketing)
- Role out access to tools in steps

Sharing is Caring

- Create a space on Teams for colleagues to show their best successes - and their worst failures – with GenAI
- This will help to inspire others to use the tool and understand its uses and limitations

Training

- Show people where and how they can access the tools
- Show users how the tools can help them in their specific roles

Time requirements

- Colleagues will need to incorporate GenAI into their workflows at their own pace – the only way to see value is to use it
- Comprehensive training is the best way to get started

Key Takeaways

Three things to remember from today

Key Takeaways

- AI is a **productivity tool** that **enables people** to do more of the things where they add real value. It's not a replacement for people

Key Takeaways

- AI is a **productivity tool** that **enables people** to do more of the things where they add real value. It's not a replacement for people
- **GenAI is amazing**, but it makes convincing mistakes. It's vital to watch out for these

Key Takeaways

- AI is a **productivity tool** that **enables people** to do more of the things where they add real value. It's not a replacement for people
- **GenAI is amazing**, but it makes convincing mistakes. It's vital to watch out for these
- **Training is essential** - show employees how Copilot can make their specific roles easier and they will use it

Let's update your industry and build a more
desirable future – **together.**
